COMPUTER ENGINEERING DEPARTMENT

Seminars and Field Trips

AI IN THE REAL WORLD: APPLICATIONS & CAREER PATHS FOR COMPUTER ENGINEERS

Feb 28, 2026

Speakers:

Engr. Ralph David R. Mague

Organizer:

Ralph James Lima

Alserge Miraveles

Certificate of Participation

The seminar “AI in the Real World: Applications & Career Paths for Computer Engineers” was presented by Engr. Ralph David R. Mague. During the discussion, he talked about how Artificial Intelligence (AI) is being used in real-life situations and how it is creating many career opportunities for Computer Engineering students. He explained that AI is not just a theory or concept but a powerful tool that is already changing how industries work.

One of the main topics discussed was the real-world application of AI. Engr. Mague explained that AI is used in many fields such as healthcare, transportation, business, education, and manufacturing. He shared that AI systems can help analyze data, make predictions, and improve decision-making. This allows companies and organizations to work more efficiently and accurately.

He also talked about automation, which is one of the most important uses of AI. He explained that automation helps machines and systems perform tasks without much human intervention. For example, AI can be used in automated customer service, smart factories, and even in self-driving technologies. He emphasized that automation helps reduce human workload, improve productivity, and minimize errors. However, he also reminded students that human engineers are still needed to design, monitor, and improve these automated systems.

Another important topic discussed was the career opportunities in AI and computer engineering. Engr. Mague explained that the demand for skilled engineers is increasing because many companies are now using AI-based systems. He mentioned possible career paths such as AI engineer, data analyst, software developer, system designer, and automation engineer. He encouraged students to focus on building strong technical skills so they can be prepared for these future careers.

The speaker also highlighted the importance of continuous learning. Since AI technology is always changing, engineers must keep updating their knowledge and skills. He encouraged students to practice coding, explore AI tools, and work on real-world projects to gain experience. According to him, learning does not stop after graduation because the field of technology keeps evolving.

In addition, Engr. Mague emphasized problem-solving and adaptability. He explained that engineers must be able to understand complex problems and develop effective solutions using AI and technology. He also mentioned that being flexible and open to change is important because new technologies are constantly being introduced.

In conclusion, the seminar provided valuable insights into the role of AI in the real world and the opportunities it offers for Computer Engineers. Engr. Ralph David R. Mague shared important lessons about AI applications, automation, and career paths in the industry. The seminar helped me understand that AI is shaping the future of technology and that Computer Engineers play a key role in developing and improving these systems. It also taught me that success in this field requires continuous learning, strong technical skills, and the ability to adapt to new technologies.
