A DEVELOPER'S ODYSSEY: DEEP DIVE INTO WEB DEVELOPMENT AND DEPLOYMENT

Feb 28, 2026

Speakers:

Mr. Jobette Escobañas

Organizer:

Patricio Najel

Certificate of Participation

UNIVERSITY OF SAN JOSE - RECOLETOS
SCHOOL OF ENGINEERING
DEPARTMENT OF COMPUTER ENGINEERING

CERTIFICATE OF RECOGNITION

THE FOLLOWING AWARD IS GIVEN TO

Gian Carlo F. Tuquib

For being an invaluable part of the assembly at the seminar entitled,
"A DEVELOPER'S ODYSSEY: DEEP DIVE INTO WEB DEVELOPMENT AND DEPLOYMENT."
Given this 28th of February 2026 at University of San Jose - Recoletos Main Campus, Cebu City, Philippines.

PATRICIA JOSE NAJEAL
ORGANIZER

JU LENE JAN EVANGELISTA
INSTRUCTOR, SEMINARS AND FIELDTRIPS

The seminar "**A Developer's Odyssey: Deep Dive into Web Development and Deployment**" was presented by **Mr. Jobette Escobañas**. During the seminar, he shared valuable knowledge about the process of developing and deploying web applications. He discussed the different stages involved in web development and explained the skills and tools that developers need to create successful and reliable web applications.

One of the main topics discussed by Mr. Escobañas was the importance of understanding the fundamentals of web development. He explained that web development involves both the front-end and back-end parts of a website or application. The front-end is responsible for what users see and interact with, while the back-end handles the processing of data, business logic, and database operations. He emphasized that developers should have a strong understanding of programming languages, web technologies, and development frameworks to build effective web applications.

Mr. Escobañas also talked about the web development process. He explained that creating a web application starts with planning and designing the system based on user needs. After the design phase, developers begin coding and testing the application to make sure it works correctly. He stressed the importance of testing because it helps identify and fix errors before the application is released to users. Proper testing improves the quality, security, and performance of the system.

Another important topic in the seminar was deployment. Mr. Escobañas explained that deployment is the process of making a web application available for users on the internet. He introduced different tools and platforms that developers use to deploy applications. He also discussed the importance of managing servers, databases, and security settings to ensure that applications run smoothly and safely. According to him, deployment is just as important as development because even a well-designed application can fail if it is not deployed properly.

The speaker also emphasized the importance of continuous learning in the field of web development. Technology changes rapidly, and new tools, frameworks, and programming practices are introduced regularly. He encouraged students to keep learning, explore new technologies, and gain hands-on experience through projects and practice. By doing so, aspiring developers can stay updated and improve their skills over time.

In addition, Mr. Escobañas highlighted the value of problem-solving, teamwork, and communication skills. Web development projects often involve working with designers, project managers, clients, and other developers. Being able to communicate

clearly and work effectively with a team helps ensure the success of a project. He reminded students that technical skills and soft skills are equally important in the professional world.

In conclusion, the seminar provided a comprehensive overview of web development and deployment. Mr. Jobette Escobañas shared practical knowledge and real-world insights that helped students understand the complete journey of building and launching web applications. The seminar taught me that successful web development requires technical knowledge, careful planning, testing, deployment skills, continuous learning, and effective teamwork. These lessons will be valuable in preparing for a future career in Computer Engineering and software development.
